SUMMARY

Java Developer at Tata Consultancy Services with 2+ years of experience building backend solutions in large-scale enterprise environments. Skilled in designing and developing Spring Boot-based backend services and REST APIs, with a focus on efficient data modeling and scalable, stable systems. Proficient in Java frameworks and microservices architecture, with a strong track record of collaborating effectively within cross-functional teams to deliver reliable, high-quality solutions on tight timelines

WORK EXPERIENCE

Systems Engineer, Tata Consultancy Services

07/2024 – Present

- **Led application revamp initiatives** including dependency upgrades, version compatibility fixes, and vulnerability remediation using **Black Duck**, resolving security vulnerabilities across **7+ enterprise applications** and improving security compliance, system stability, and maintainability.
- **Migrated key application components from Apache Struts to Spring Boot**, improving maintainability, security, and deployment speed across legacy systems.
- **Resolved a critical database timeout issue** causing failed row fetches under high traffic, by diagnosing and optimizing **HikariCP** connection pool configuration (pool size, connection timeout, and idle timeout tuning) — eliminating recurring timeout failures and reducing average query response time by **~40%** in production.
- **Developed 20+ RESTful endpoints in Spring Boot** for various enterprise applications, integrating with relational databases and automating daily report generation via **scheduled (cron) jobs**.
- **Designed and implemented secure authentication and authorization** using **Spring Security** and **JWT**, enforcing **role-based access control (RBAC)** and securing REST APIs against unauthorized access.
- **Consumed external REST APIs** and integrated with tools such as **Jira REST APIs** to automate incident tracking and provide real-time status updates for stakeholders.
- **Built microservices-based applications** with synchronous inter-service communication using **OpenFeign Client**, enabling reliable request-response interactions in a distributed architecture.
- **Optimized database queries and JPA entity mappings**, resolving **N+1 query issues** through fetch strategy tuning and reducing API response times for high-volume data processing.
- **Wrote unit and integration tests** using **JUnit** and **Mockito** across service and controller layers, improving code coverage and reducing regression defects.

SKILLS

Language/Frameworks

Java, Spring-Framework and Eco-Systems,
SQL, Microservices

Knowledge

REST-APIs, Concurrency, MultiThreading, Computer
Networks, DBMS

Tools

Postman, Open-API/Swagger-UI, Git, Jenkins,
BlackDuck

Learning

Python
